

The World's Most Expensive Breakfast?

Pouring fats, oils and grease down the drain can cost you big money for plumbing repairs and cause sewer overflows.

See other side for more information.

DON'T pour grease down
the drain!

It sticks to the sides of the pipes, clogging
them *and* sewers under the street.

DO pour grease into a can
or bottle and throw it in
the garbage.

GREASE COMES FROM...

- Meat fat
- Cooking oil
- Sauces
- Food scraps
- Butter & Margarine
- Lard
- Shortening
- Baking goods
- Dairy Products
